# DIABETES

ED-30  
Insuline cooler bag  
(5 hours max.)

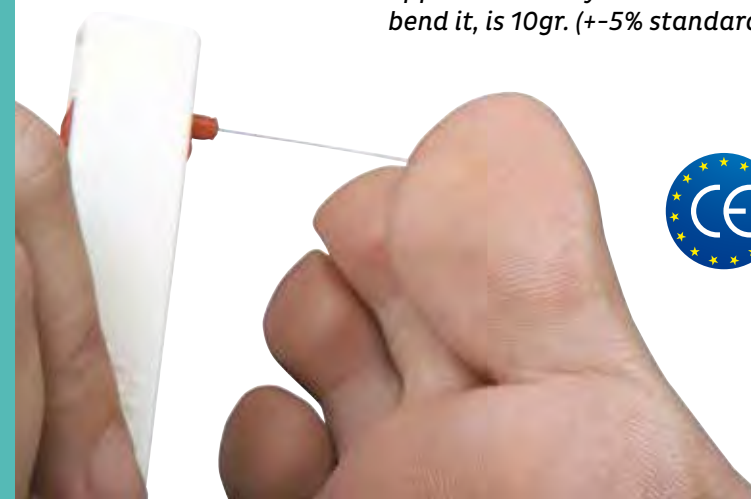

## SENSI TEST. A PRELIMINARY DIAGNOSIS OF SENSORIAL NEUROPATHY IN DIABETES

### What is a monofilament?

This is a tool that can detect a patient's ability to perceive moderate pressures in peripheral parts of the body and has proven to be predictive for foot ulceration risk. In fact, it is a form or a way of "pre-screening" to test possible functional changes in large sensorial fibres.

The filament of 5.07 has been accepted as the medical standard to show the minimum level of foot sensibility. The necessary pressure to bend it, is 10gr. (+/-5% standard deviation)

1801  
Monofilament "Sensi-Test"  
Packaging: flow-pack or carton pouch
